SUMMARY

Mathematics and Computer Science student with experience building AI agents, RAG pipelines, test automation, and full-stack applications.

EDUCATION

Boston University, College of Arts and Sciences

May 2027

BA, Mathematics and Computer Science (GPA: 3.9)

- **Achievements:** Dean's List
- **Coursework:** Distributed Systems, Computer Systems, Software Engineering, Mathematical Statistics, Analysis of Algorithms, Concepts of Programming Languages

WORK EXPERIENCE

State Street | Charles River Development | *Software Engineer Intern*

Jun 2026 - Aug 2026

- Engineered a retrieval-ready knowledge base by converting internal documentation and test assets into chunked Markdown files, creating a reusable source of engineering context for vector indexing and GitHub Copilot agents
- Developed a three-agent pipeline that analyzed C# test suites and added reusable entry points, coverage observations, and supporting code to the knowledge base, expanding the evidence available for test-analysis workflows
- Implemented a general-purpose GitHub Copilot agent that searches a local vector index, iteratively refines queries, and produces cited responses grounded in company documentation, enabling engineers to obtain accurate answers for a wide range of engineering prompts

Playa Bowls | *Team Member*

Jun 2025 - Sep 2025

- Managed customer orders and coordinated with teammates during peak-volume shifts to maintain efficient service

PROJECTS

Aurelius | Go, Transformers, ML Systems, JavaScript | [Repository](#)

May 2026 - Jul 2026

- Implemented a byte-level causal transformer and training pipeline in Go with Adam optimization, learning-rate scheduling, gradient clipping, and checkpoint save/resume
- Generated synthetic arithmetic and polynomial-derivative curricula with exact-match evaluation across difficulty levels, prompt formats, and edge cases
- Built a hybrid inference router that validates model outputs with deterministic solvers and serves responses through a browser-based chat interface

OpenShed | React Native, Expo, Spring Boot, PostgreSQL, Supabase

Jan 2026 - May 2026

- Collaborated with a team to build a mobile marketplace for peer-to-peer tool borrowing and repair services using React Native, Expo, Spring Boot, PostgreSQL, and Supabase
- Designed the messaging subsystem with persistent conversations, participant-based authorization, inbox and chat DTOs, REST endpoints, and user blocking
- Built transaction-gated ratings and reviews across borrowing and repair workflows, including eligibility checks, aggregation, profile summaries, and mobile submission flows

AI NPC Platformer | JavaScript, HTML5 Canvas, Node.js, xAI API | [Repository](#)

Jan 2026 - Feb 2026

- Built an HTML5 Canvas platformer in vanilla JavaScript with a real-time game loop, physics, collision detection, level progression, NPCs, and inventory-gated mechanics
- Developed a Node.js API proxy for xAI-generated NPC dialogue using the Fetch API, with client-side fallback responses that preserve playability without backend configuration

SKILLS

- **Languages:** Python, Java, SQL, C, Go, JavaScript, R
- **Frameworks:** Spring Boot, React Native, Node.js, Expo, Cucumber
- **Tools & Platforms:** Git, Docker, Linux, PostgreSQL, Supabase, GitHub Copilot, Jira, Confluence
- **AI & Software Concepts:** Vector Embeddings, REST APIs, Test Automation, RAG, Transformers

LEADERSHIP EXPERIENCE

Theta Chi Fraternity | *Recruitment Chair*

Jan 2024 - Dec 2024

- Led strategic outreach, digital marketing, and twelve recruitment events, increasing chapter membership by 35%
